

QA Guide

Overview

Validates source files, loads to PostgreSQL, and checks every record against a contract.
Reports: target count, mismatch count, rule failures, environment, PASS/FAIL.

Safety

recon_ro is SELECT only. recon_rw is loader only.

How to run

robot -d results tests/mvp and CI runs on push, PR, nightly schedule.
Results land in report.html, log.html, and run_summary.json.

Prepared for QA and management review.
